

Deliver Offensive Security as a Managed Service

Pentesterra's MSSP tier gives you full multi-tenant isolation, white-label reporting, and per-client scanner node deployment - so you can offer automated continuous pentesting to every client under one platform and one contract.

BUILT FOR MANAGED SERVICE PROVIDERS

Multi-Tenant Isolation

Each client is a fully isolated tenant - separate scan scope, findings, reports, and credentials.

→ No cross-contamination between clients

Per-Client Scanner Nodes

Deploy dedicated scanner nodes inside each client's environment.

→ Nodes report only to that client's tenant scope

Branded Reporting

White-label PDF reports with your logo and branding.

→ Clients see your report, not Pentesterra's

Client Portals

Give each client read-only or collaborative access.

→ Findings, dashboards, and remediation status

Centralised SLA Tracking

Monitor finding age, remediation velocity, and SLA compliance.

→ Across all client tenants from a single dashboard

Flexible Billing Tiers

Bundle Pentesterra into your managed service pricing.

→ MSSP tier includes unlimited client tenants under a single contract

WHY MSSPS BUILD ON PENTESTERRA

Margin comes from automation, not headcount

One analyst can run continuous pentests across dozens of client tenants.

- Discovery, exploitation, verification, and reporting are automated
- Your team spends hours on escalations and client relationships

You deliver verified findings, not scanner dumps

Every finding is exploited non-destructively before it reaches a client report.

- You hand over confirmed risk with a proof-of-concept, not a CVSS spreadsheet

The report is yours

White-label PDF and JSON output carry your branding.

- Clients get a per-cycle delta, SLA status, and remediation tracking under your name

WHAT THE MSSP TIER INCLUDES

- ✓ Fully isolated tenant per client: separate scope, findings, credentials, and reports
- ✓ Per-client scanner nodes that report only into that client's tenant
- ✓ White-label PDF + JSON reports with your logo and language
- ✓ Cross-tenant dashboard: finding age, remediation velocity, and SLA compliance in one view
- ✓ Read-only or collaborative client portals for findings and remediation status
- ✓ Unlimited client tenants under a single MSSP contract

FAQ

How isolated is one client's data from another's?

Each client is a separate tenant with its own scan scope, findings, reports, and credentials. Scanner nodes are bound to a single tenant, with no shared view of raw findings across clients.

Can we fully white-label it?

Yes. Reports are generated with your logo, colors, and wording, and client-facing portals can be branded. Clients interact with your service, not with a Pentesterra-branded product.

How does billing work for a managed service?

The MSSP tier is a single contract that covers unlimited client tenants, so you can bundle Pentesterra into your own managed-service pricing without per-client license negotiation.

Can we run it in a client's air-gapped or on-prem environment?

Yes. Scanner nodes and, where needed, the full platform can run inside a client's network with no outbound connectivity, while still rolling SLA and status metrics up to your central view.

Talk to the MSSP team

One platform, unlimited client tenants, your brand on every report.
