

AUTOMATED SECURITY VALIDATION PLATFORM

Verified resilience. Not more noise.

Pentesterra is an automated security validation platform that verifies **exploitable vulnerabilities** across developer environments, applications, APIs, and infrastructure — so your team acts on **confirmed risk**, not **scanner output**.

EXAMPLE VERIFIED-EXPOSURE OUTPUT

214 detected → 43 verified exploitable → 17 patch-first · 58% false positives suppressed in this flow

```
AFTER-FIX REVALIDATION · APP.PENTESTERRA.COM
$ pentesterra revalidate --after-fix
→ 0 regressions · 43 verified · 17 patch-first
```

ONE VERIFIED-FINDINGS PIPELINE

Three entry points, one pipeline.

| | | |
|--|---|---|
| <p>DevGuard DEVELOPERS · APPSEC</p> <p>Feeds developer-side risks — secrets, supply chain and AI-tooling exposure — before code is pushed, without uploading source code.</p> | <p>Vulnerability Management CISO · IT SECURITY</p> <p>Feeds infrastructure exposure — external and internal scanning across your perimeter and internal network.</p> | <p>Web / API Pentest APPSEC · PRODUCT SECURITY</p> <p>Feeds application & API vulnerabilities — authenticated testing with PoC-ready evidence.</p> |
|--|---|---|

→ Pentesterra verifies, correlates and prioritizes every signal into one verified-findings pipeline.

WHEN TO USE PENTESTERRA

- ✓ Reduce scanner noise and false positives.
- ✓ Identify exploitable vulnerabilities before attackers do.
- ✓ Prioritize remediation by business impact.
- ✓ Validate web/API and infrastructure exposure continuously.
- ✓ Run security validation in sovereign, on-prem or air-gapped environments.

ONE CODEBASE, EVERY ENVIRONMENT

Core technology: proprietary DAST engine, triage system and risk-chain correlator, developed since 2021.
Control: sovereign, GOV-grade deployment model.

DEPLOYMENT

- SaaS
- Private cloud
- On-prem
- Air-gapped

Market context: the average data breach costs **\$4.88M**; reported breaches rose **+30% YoY** (IBM, 2024).
